SSTUWA
State School Teachers' Union of WA

COVID-19 update

The SSTUWA has welcomed the decision by the state government to delay the opening of WA's borders.

While we understand that this will be difficult for some of our members, it does give more time to make WA schools and TAFEs as safe as possible for those who work and learn there. It is crucial that this time is not wasted.

Principals, teachers and lecturers have been increasingly anxious in the lead up to the new term, understanding thereality that schools and TAFEs will be high risk environments in any Omicron outbreak.

Educators want clear advice on what is being done to make workplaces safer. Omicron is already here in WA and open borders or not, many educators are concerned about what will be done to keep them, all staff and students safe.

School and TAFE staff are particularly anxious about vaccinations, testing and ventilation.

Vaccination

The union welcomes the requirement for all staff to have a booster shot and expects that principals/managing directors will be instructed to facilitate staff access to these appointments.

The issue of unvaccinated persons, parents in particular, accessing school sites is of concern.

In the TAFE situation, concerns remain around unvaccinated students. These are generally adults; college staff have raised concerns about working with unvaccinated adults due to the greater transmissibility of the Omicron variant.

The issue of pandemic or COVID-19 leave for those vulnerable staff who, despite being vaccinated, feel unsafe working with unvaccinated students needs to be addressed. The SSTUWA seeks provision of sufficient leave for these teachers and lecturers.

The clearest benefit to a delay in opening the borders is it gives people more time to get vaccinated. Given the logistics involved, this time is essential.

Ventilation

Medical advice stresses the need for proper ventilation measures to ensure that levels of CO2 do not promote the transmission of the Omicron variant of the COVID-19 virus.

This means that schools and colleges need the capacity to determine the CO2 levels and, if necessary, take the appropriate measures to address problems.

We are aware that the school sector has conducted an audit of all workspaces; the next step is to provide appropriate strategies, including equipment, to rectify any problems.

The SSTUWA is pressing the government to acquire sufficient CO2 monitors and HEPA filters for schools and colleges.

Testing

There are significant concerns among our members around the testing of students.

Access to rapid antigen tests is critical. If schools and colleges are to remain open then it is imperative that school and college staff have priority access to free RATs. This must be on an ongoing basis, as students may test positive at any time.

The SSTUWA is seeking an assurance that RATs for students will be administered at home.

Casual/close contacts

The National Cabinet decision to change the definitions of close and casual contacts is of considerable concern to school and college staff. We believe that the new definitions hold particular problems for teachers given the close interactions which occur in many school settings.

The union has been working cooperatively with government on these issues and will continue to do so. However, proper and full information needs to be provided by the employer to reassure educators that their workplaces will be safe.

If you need to book a booster you can do so via this link.
